buildee® Reports
Software to Rapidly Report on Building Energy

buildee Reports Example Use Cases

Utility Reports

Through auto-generated reporting, buildee streamlined energy conservation measure (ECM) recommendations for a large Midwest utility with a report that organizes the incentives into categories and generates an appendix table containing the associated rebate codes. As a result, buildee has reduced a 3-week process down to 25 minutes, accelerating access to more building owners and adoption of incentive programs.

Compliance Reports

buildee streamlines compliance with local laws that mandate energy use transparency, strategic energy management, and the reduction of GHG and carbon emissions. buildee auto-generates benchmarking and audit reports in compliance with Local Laws (including NYC LL84 and 87) through integrations with Energy Star Portfolio Manager and DOE Audit Template tool.

ESG & Sustainability Reports

2030 Districts are Public/Private Partnerships working with local building and portfolio owners to increase sustainability and reduce emissions. buildee has been instrumental in creating auto-generated building member reports for Districts and has seamlessly integrated District, Building, and Utility data into reports. buildee auto-generates building, portfolio, and district-level reports for rapid distribution to stakeholders.
